Load Control Valves

BPF08-00/X.Y

Specifications:

Max.Working Pressure: 270bar

Flow Max: 30L/min

Internal Leakage : <0.4ml/min

Filtraion Of Oil: 25µm or better

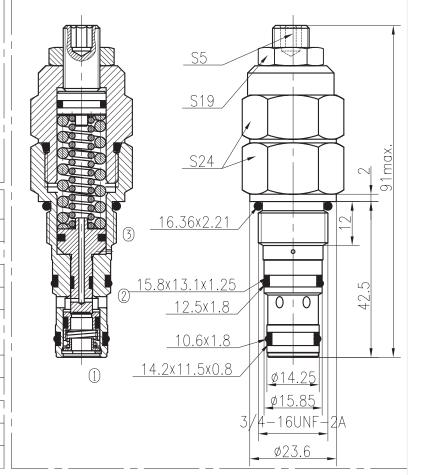

Temperature : $-30 \sim +100 \circ$

(Standard Buna Seals)

Cavity: T4-2

Installation torque : 24.5~27.2Nm

Pilot Ratio : 4.0:1

The valve controls moving load and preventing it from running ahead of the pump,locking the load in any position,it also provides static overload and thermal enpansion protection.

The valve allows free flow from © to O and blocks reverse flow until a pilot pressure proportional to the load pressure is sensed at ® modulating flow from Oto O.
